

## Franke Coffee Systems The art of excellent coffeemaking

### bremer Filtered Coffee Machine VIVA Filtro

Filtered coffee machine for producing large quantities of filtered coffee (brewed coffee) with easy manual metering of ground coffee.

#### Design:

All major parts are made of high-grade stainless steel. Housing parts and filter cover are made of easy-care plastic. Non-return valve and VDE safety temperature limit switch. The machine carries the CE mark, is suppressed (shielded) and VDE tested. Modularly designed and equipped with LON Works network standard.

#### Features and equipment:

The measured ground coffee is put manually into a sieve holder with filter paper. The VIVA Filtro provides 4 different brewing levels from 0.5 to 2 litres for selection. The freshly brewed coffee is optimally stored in a built-in 4 litre glass container. Single cups, small pots, pots or jugs of filtered coffee can then be drawn from the machine. Products are served automatically after pressing a product button.

The amount of water for each brewing level can be individually set. The filter machine has 4 product buttons; these can be individually programmed and assigned for cup, small pot, pot and jug. The coffee can also be dispensed via a special jug outlet (extra charge) into a large thermos that can then be placed on a convenient jug tray (optional). All served beverages are shown in the display, are registered and can be called up. The coffee preparation system is manually cleaned.

#### Technical data:

Hourly performance:	180-200 cups of filtered coffee
Brewing levels:	0.5-2 litres
Content:	4-litre storage container
Dimensions:	240 x 560 x 785 mm (W x D x H)
Articel no.:	bremer VIVA Filtro 894 001
